TECHNICAL SKILLS

- **Languages / Databases:** Embedded C, C++, Python
- **Developer Tools:** VsCode, Keil, MPLabx
- **Simulation Platforms:** Proteus8, PicSimLab
- **Protocols:** UART, TCP/IP, OSI
- **Ticketing Systems:** ServiceNow, Footprints, TeamDynamix

PROFESSIONAL EXPERIENCE

Student Network Engineer, Purdue University **Jan 2023 – Dec 2023**

- Configured and installed Cisco catalysts (2650s to 9300s), firewalls, load balancers, DNS.
- Maintained Purdue Cloud System, performance by applying hot fixes and security configurations.
- Developed scripts to automate firmware upgrades over 800 network devices.

ServiceNow Associate, Purdue University Fort Wayne **Feb 2022 – Jan 2023**

- Automated tickets for 20 helpdesk associates based on time, rating, and expertise-based criteria.
- Agent auto assignment improved the help desk performance by 61% and customer satisfaction.
- Initiated Help Desk Training Module by analyzing daily challenges faced by current employees with knowledge base.

EDUCATION

Master of Science in Computer Science **Jan 2022 - Dec 2023**
Purdue University, Fort Wayne, Indiana
Related course: High-Performance Computing, NLP, Expert Systems, Network Security and Cryptography

Bachelor of Engineering Computer Engineering **Aug 2016 - Aug 2019**
Pune University, Pune, India
Related Course: High Performance Computing, Artificial Intelligence & Robotics, Cloud Computing, Distributed Systems

PROJECTS

PIC Embedded System

- Developed firmware on PIC microcontrollers using Embedded C, focusing on peripheral configuration and register-level control.
- Built small applications using **GPIO**, **timers**, **PWM**, **serial communication**, and **interrupts**, emphasizing timing and signal generation.
- Integrated external components such as **LEDs**, **switches**, **LCDs**, and generated hex files using standard PIC development tools.

8051 Embedded System

- Gained hands-on experience with the 8051-microcontroller architecture using Assembly and Embedded C, including **instruction sets** and **addressing modes**.
- Implemented timer-based logic, **UART communication**, interrupt handling, and **I/O port control** to understand low-level firmware behavior.
- Interfaced and explored basic external memory interfacing along with hex file generation.

SNMPv3 upgrade over Cisco IOS network devices for Purdue West Lafayette

- Collaborated on a Python script in CI/CD environment to update the SNMP versions of devices.
- Tested the Python script with several edge cases around 800 network devices.
- Produced an Ansible script to upgrade over cisco IOS_XE and Once IOS_XE is a success, implement it on all the campuses.
